

## PRESS RELEASE

### RENFORTH RESOURCES INC.

Suite 450, 44 Victoria Street, Toronto, Ontario, M5C 1Y2

## Renforth Announces Drilling on Kyle #2

**Toronto, Canada (November 15, 2006)** – Renforth Resources Inc. (“Renforth”) announces that it has completed two NQ core diamond drill holes designed to determine the geometry of the Kyle #2 kimberlite located in the Attawapiskat area in Northern Ontario.

The two holes intersected kimberlite as set out below. Hole #2 under cut Hole #1 and both were drilled approximately 100 meters north of Hole DR-95-34 that was previously drilled by the Spider/KWG joint venture in 1995 where the JV recovered 9 diamonds with dimensions greater than 0.5 mm in two dimensions from selected kimberlite samples. A total of 34 samples generally being 3 metre sections, have been selected from the core and will be sent for micro/macro diamond analysis at a suitable diamond recovery laboratory. Kimberlite from Hole #1 is estimated to weigh +/- 220 kg., while the kimberlite from Hole #2 is estimated to weigh +/- 330 kg.

### Drilling Details (Depth is measured downhole)

Line 75 E - 1+30 N	DEN-06-01	DEN-06-02
Dip	52 <sup>0</sup>	62 <sup>0</sup>
Azimuth	180 <sup>0</sup>	180 <sup>0</sup>
Paeleozoics	0-88.6 m	0 – 128.75 m
Kimberlite	88.6 – 139.8 m	128.75 – 209.2 m
Basement Granite		209.2 -241.0 m
End of Hole	139.8 m( Drill stem problem)	241.0 m

The management of the drilling program along with the logging and sampling of the drill core was conducted by: Howard Lahti (Ph.D., P.Geo), and Neil Novak, P. Geol., both of which are “Qualified Persons” as defined by National Instrument National Instrument 43-101. Estimates of weight of kimberlite were determined by using the kimberlite core recovery, diameter and length to determine volume, multiplied by the average field measured specific gravity (2.49) of the kimberlite samples.

### About Renforth

Renforth is a junior resource company focused on the exploration and development of diamond mining properties. The company has a large land holding in the Attawapiskat region of Ontario adjacent to the Victor diamond mine that is now under development by DeBeers. The property holding includes the five diamondiferous kimberlites known as the Kyle series as well as claims that contain high potential geophysical anomalies.

Renforth is a reporting issuer that is currently proceeding with a listing application for the TSX-V.
