

PRESS RELEASE

RENFORTH RESOURCES INC.

Suite 450, 44 Victoria Street, Toronto, Ontario, M5C 1Y2

Toronto, Canada (April 19, 2007) – Renforth Resources Inc. (“Renforth”) announces an update of its winter exploration program. A total of 12 grids totaling 284.4 line kilometers have been completed on the high priority targets. Ground magnetic surveying has been completed and analysis and interpretation of the results reports are being prepared. The magnetically rendered anomalies will be further prioritized for additional follow-up work that may include diamond drilling. Nine high priority anomalies selected from the airborne geophysical surveying, along with ten second priority targets, were selected for this detail ground geophysical surveying. In addition if an additional anomaly was located in the vicinity of the primary target, these anomalies were also surveyed as part of this program.

Renforth and Spider Resources Inc., who has an option agreement with Renforth, greatly appreciated the assistance of both Webequie First Nation and Marten Falls Indian Reserve #65 in many aspects of the field work, including line cutting, camp construction and maintenance.

As previously announced (November 13, 2006), Renforth has collected approximately 500 kilograms of kimberlite from two holes testing the Kyle 2 kimberlite last fall. This kimberlite sample has been transported by bonded carrier to a secure warehouse in southern Ontario, where it will be stored until a suitable diamond processing lab is available for processing the NQ sized core. The samples will be stage crushed to an appropriate screen size and processed using dense media separation (DMS) to collect diamonds on a 0.8 mm screen. Several 8 kilogram sample lots of kimberlite will be selected from the DMS feed stream and will be processed for microdiamond content for size distribution curve analysis. All aspects of the diamond processing will be completed under the auspices of Neil Novak P.Geo in his role as project manager and Qualified Person. Mr. Neil Novak is also President and Chief Executive Officer of Spider Resources Inc.

About Renforth

Renforth is a junior resource company focused on the exploration and development of properties for mining diamonds in Canada. The company has a large land holding in the Attawapiskat region of Ontario adjacent to the Victor diamond mine that is now under development by DeBeers. The property holding includes the five diamondiferous kimberlites known as the Kyle series as well as claims that contain high potential geophysical anomalies.
