

PRESS RELEASE

RENFORTH RESOURCES INC.
Suite 450, 44 Victoria Street, Toronto, Ontario, M5C 1Y2

Toronto, Canada: (Thursday February 1, 2007) – Renforth Resources Inc. (“Renforth”) announces that it has received a report titled Evaluation and Recommendations of Kimberlite and Metallic Mineral Exploration Targets in the Attawapiskat River Region Northern Ontario. The report was prepared by Scott Hogg & Associates Ltd. (“Hogg”) to assess a number of claim blocks staked by the Company.

The claim blocks were staked to acquire exploration targets based on previous geophysical survey data approximately 100 km west of the DeBeers Kimberlite swarm. The ground is near the Kyle Kimberlite swarm that Renforth is currently exploring. Hogg conducted Magnetic Anomaly Evaluation and Magnetic Modeling to rank the anomalies according to the type of mineralization (diamonds or sulphide minerals) and assign a follow-up priority. The result is:

	Priority 1	Priority 2	Priority 3
Kimberlite	8	7	6
Sulphide Minerals	2	3	7

The Company is presently conducting a detailed drilling and exploration program on the Kyle kimberlite series and will also conduct ground follow-up on the Priority 1 anomalies with geophysics and if warranted diamond drilling.

About Renforth

Renforth is a junior resource company focused on the exploration and development of gold and diamond mining properties. The company is exploring a gold prospect in the Timmins-Kirkland Lake area of Ontario and has a large land holding in the Attawapiskat region of Ontario adjacent to the Victor diamond mine that is now under development by DeBeers. The property holding includes an interest in the five diamondiferous kimberlites known as the Kyle series as well as claims that contain high potential geophysical anomalies.
